About the job

Job Details

Description A Career as Unique as You! At Abell, we're constantly reinventing ourselves. Good business means on-going research and development for more environment sensitive products, safer methodology, applications and different creative ways of doing business. Meeting our customer's needs means to be constantly challenging our employees with an entirely new and exciting way to work.

Position Summary The Junior Web Developer plays a key role in building and maintaining web applications that support both internal operations and customer-facing solutions. Working within a collaborative IT team, this role contributes directly to enhancing user experience, streamlining business processes, and ensuring technology solutions are reliable and innovative. This position is an excellent opportunity for someone eager to grow their technical skills while making a meaningful impact through high-quality software development.

Key Responsibilities Web Development & Implementation

- Participate in the design, implementation, and maintenance of Microsoft stack .Net web applications for internal and external users.
- Integrate web applications with a large, well-established back-end data store. Integrate third party components and libraries with our web solutions.
- Perform website updates as directed to ensure functionality and accuracy.

Quality Assurance & Testing

- Develop and validate test routines and schedules to ensure compatibility across browsers, devices, and external interfaces.
- Evaluate code to confirm it meets industry standards, is properly structured, and functions across multiple platforms.

Troubleshooting & Problem Resolution

- Identify issues uncovered by testing or client feedback and resolve or escalate them to the appropriate personnel.
- Apply strong problem-solving skills to ensure timely, effective fixes and long-term solutions.

User Needs & Technical Requirements

- Analyze technical requirements to determine user needs and deliver software solutions that align with business objectives.
- Stay current with emerging technologies, industry standards, and best practices to enhance development capabilities.

Education College diploma or university degree in Computer Science or a related field.

Commitment to continuous learning through professional development, networking, and staying current with industry standards.

Skills And Experience

- One or more years of real-world experience developing and maintaining production-quality software.
- Domain experience in field services considered a strong asset.
- Some working knowledge of HTML, CSS, JavaScript, C#, MVC frameworks, and Microsoft web stack frameworks: Blazor, WebAssembly, and ASP.Net Web Forms.
- Exposure to the DevExpress component suite an asset.
- Experience using TSQL for Microsoft SQL Server.
- Experience integrating third-party APIs (RESTful/JSON).
- Familiarity with Azure DevOps practices.
- Excellent problem-solving, troubleshooting, and analytical skills.
- Ability to multi-task, prioritize, and work independently with a strong focus on results
- Fluent English with strong written and verbal communication, interpersonal, and support skills.

Pay Range: \$60-70k range

Abell Pest Control does not use artificial intelligence or automated decision-making tools in the screening, assessment, or selection of job applicants. All applications are reviewed by members of our hiring team.

This position is an existing vacancy within our organization.
