

Python Developer - Toronto, ON - Indeed.com

<https://ca.indeed.com>

We are looking for a Python Developer. We are hiring on behalf of Deloitte.

Responsibilities

- Design, develop, test, and debug backend services and APIs using Python and FastAPI, ensuring high performance, reliability, and maintainability
- Build server-side logic, integrate RESTful services, and support microservice-based architectures aligned with enterprise standards
- Work extensively with SQL-based data sources, writing, optimizing, and maintaining complex queries, views, and stored procedures to support application logic, reporting, and data enrichment
- Develop scripts and services for data extraction, transformation, processing, and system automation, integrating both relational (SQL) and NoSQL (MongoDB) databases
- Contribute to solution and application architecture, including system design, integration patterns, data flows, and scalability considerations
- Collaborate with architects and senior engineers to ensure solutions are secure, well-designed, and production-ready
- Support GenAI-enabled features where applicable, such as prompt design, retrieval from structured data, and vectorized search, without being focused on model development
- Partner closely with cross-functional teams and stakeholders, applying strong people and communication skills to translate requirements, explain technical concepts, and support delivery from design through production

Qualifications:

You are someone with these skills, experience and qualifications:

- Strong proficiency in Python (3.x) for backend and data-driven application development
- Hands-on experience with FastAPI for building scalable, production-grade APIs
- Strong experience with SQL, including writing and optimizing complex queries, joins, CTEs, views, and stored procedures
- Backend development experience building server-side logic, RESTful APIs, and microservices
- Experience working with relational databases and NoSQL databases (e.g., MongoDB)
- Experience developing scripts for data extraction, processing, and automation
- Exposure to GenAI-enabled application features, including:
 - Prompt engineering
 - Retrieval patterns using structured data
 - Experience with vectorization, embeddings, or RAG-style data retrieval
 - Familiarity with modern data platforms, analytics pipelines, or AI-assisted features
- Understanding of performance tuning, scalability, and operational support in production environments

Job Type: Full-time

Pay: \$110,000.00-\$135,000.00 per year

Experience:

- Python: 3 years (required)
- banking: 1 year (preferred)

Work Location: Hybrid remote in Toronto, ON
